Robot Arm

35th Michigan Science Olympiad State Tournament –April 29th, 2017

The event supervisor has issued the following clarification about the material of the target:

From the rules:

“A standard 40 cm archery target following FITA standards (or a printout of it) is taped down on all sides or marked onto the Competition Area.”

There is no requirement for the target to be paper. A printout could be on ANY surface, it is not specified. There is no requirement that the target be taped down, the “...or marked...” phrase allows the ES to mark the target directly on the surface with almost any method.
